Art Unit: 1652

Claims 1-8 have been canceled. Claims 9-52 are at issue and are present for examination.

Restriction to one of the following inventions is required under 35 U.S.C. § 121:

I. Claims 9-26 and 30-52, drawn to DNA, vectors and host cells encoding  $\alpha(1,3)$  galactosyltransferase and expression thereof, classified in Class 536, subclass 23.2.

II. Claims 27-29, drawn to  $\alpha(1,3)$  galactosyltransferase, classified in Class 435, subclass 193.

The inventions are distinct, each from the other because of the following reasons:

The DNA of Group I and the proteins of Group II are chemically and patentably distinct compounds and the DNA has other utility besides encoding the proteins such as a hybridization probe.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, and have acquired a separate status in the art because of their recognized divergent subject matter restriction for examination purposes as indicated is proper.

A telephone call was made to Jim Kelly on 5/9/02 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the response to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 C.F.R. § 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a diligently-filed petition under 37 C.F.R. § 1.48(b) and by the fee required under 37 C.F.R. § 1.17(h).
